

In the claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Claims 1-20 (Canceled)

21. (Currently Amended) An interbody spine fusion cage for fusing adjacent vertebrae, said spinal fusion cage comprising:

- a cage body defining an outside surface;
- a carrier receiving area defined by said cage body;
- an un-doped carrier material loaded in said carrier receiving area;
- a port that communicates said outside surface with said carrier receiving area for facilitating delivery of a biologically active substance onto said un-doped carrier material;
- a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to a target bone structure;
- an end cap on an end of said cage body for enclosing said carrier receiving area;
- wherein said port is defined by located in said end cap; and further comprising:
- a plug in said port adapted to be penetrated by a delivery device.

Claims 22-55 (Canceled)

56. (Currently Amended) An implantable device for locating within a body, said implantable device comprising:

- a body defining an outside surface;
- a carrier receiving area defined by said body;
- an un-doped carrier material loaded in said carrier receiving area;
- a port that communicates said outside surface with said carrier receiving area for facilitating delivery of a biologically active substance onto said un-doped carrier material;
- a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to a target bone structure;
- a plug in said port adapted to be penetrated by a syringe; and
- the interbody spine fusion cage further comprising:
 - a substantially solid end cap on an end of said cage body wherein said end cap encloses said carrier receiving area; and
 - wherein said port is ~~defined by~~ located in said end cap.

57. (Canceled)

58. (Previously Presented) An interbody spine fusion cage for fusing adjacent vertebrae, said spinal fusion cage comprising:

- a cage body defining an outside surface;
- a carrier receiving area defined by said cage body;
- an un-doped collagen carrier material loaded in said carrier receiving area;
- a port that communicates said outside surface with said carrier receiving area for facilitating delivery of a biologically active substance onto said un-doped carrier material;
- a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to a target bone structure;
- a plug in said port adapted to be penetrated by a syringe;
- a substantially solid end cap on an end of said cage body wherein said end cap encloses said carrier receiving area; and
- wherein said port is located in said end cap.

59. (Canceled)

60. (Previously Presented) An implantable device for locating within a body, said implantable device comprising:

- a body defining an outside surface;
- a carrier receiving area defined by said body;
- an un-doped collagen carrier material loaded in said carrier receiving area;

a port that communicates said outside surface with said carrier receiving area for facilitating delivery of a biologically active substance onto said un-doped carrier material;

a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to a target bone structure;

a plug in said port adapted to be penetrated by a syringe;

a substantially solid end cap on an end of said cage body wherein

said end cap encloses said carrier receiving area; and

wherein said port is located in said end cap.

61. (Canceled)

62. (Currently Amended) An implantable device for locating within a body, said implantable device comprising:

a body defining an outside surface;

a carrier receiving area defined by said body;

an un-doped, sponge material loaded in said carrier receiving area;

a port that communicates said outside surface with said carrier receiving area for facilitating delivery of a biologically active substance onto said un-doped carrier sponge material;

a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to a target bone structure.

63. (Currently Amended) The implantable device according to claim 62 further comprising:
- a plug in said port adapted to be penetrated by a syringe; and
 - the interbody spine fusion cage further comprising a substantially solid end cap on an end of said cage body wherein said end cap encloses said carrier receiving area; and
 - wherein said port is ~~defined by~~ located in said end cap.
64. (Canceled)
65. (Currently Amended) A bone implantable device for locating adjacent a target bone structure, said bone implantable device comprising:
- a body defining an outside surface;
 - a carrier receiving area defined by said body;
 - a pre-loaded collagen carrier material in said carrier receiving area, said pre-loaded collagen carrier material comprising a biologically active substance;
 - a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to the target bone structure;
 - ~~a plug in said port adapted to be penetrated by a syringe; and~~
 - the interbody spine fusion cage further comprising:
 - a substantially solid end cap on an end of said cage body wherein
 - said end cap encloses said carrier receiving area; and
 - wherein said a port is defined by located in said end cap;
 - a plug in said port, said plug adapted to be penetrated by a syringe.

66. (Canceled)

67. (Currently Amended) A bone implantable device for locating adjacent a target bone structure, said bone implantable device comprising:

a body defining an outside surface;

a carrier receiving area defined by said body;

a pre-loaded sponge material in said carrier receiving area, said pre-loaded sponge material comprising a biologically active substance;

a pathway that communicates with said carrier receiving area for delivering said biologically active substance from said carrier receiving area to the target bone structure;

~~a plug in said port adapted to be penetrated by a syringe; and~~

the interbody spine fusion cage further comprising:

a substantially solid end cap on an end of said cage body wherein

said end cap encloses said carrier receiving area; and

wherein ~~said a port is defined by~~ located in said end cap;

a plug in said port, said plug adapted to be penetrated by a syringe.

Claims 68-71 (Canceled)

72. (Previously Presented) An interbody spine fusion cage according to claim 21 wherein:
said delivery device is a syringe.
